# I. Overview

## A. Purpose of the Database

The Child Care and Development Fund block grant is in some sense not a single program, but more than 50 different programs operating within a common overarching set of policy guidelines and mission. While the federal CCDF provides clear guidelines and a policy framework for states, each state, each territory, and the District of Columbia are responsible for establishing a range of critical policies. For example, they are responsible for determining income levels for determining eligibility (as long as they fall under the federal ceiling), as well as defining income and whose income within the household must be counted. Similarly, states/territories are responsible for determining how often a family must reapply, when they must report changes in income or other eligibility criteria and what changes need to be reported, how income is verified, and how much the family must pay in copayment. There is also variation in policies related to providers, including the maximum amounts that providers will be paid, whether they are paid for holidays or sick days, and whether they are paid retrospectively or prospectively. All of these policies, as well as many others that also differ across states/territories, affect how the CCDF program meets the needs of families and providers in a particular area.

This variation has presented major challenges for both researchers and policymakers who need to have a consistent, comprehensive source of cross-state information on the details of a range of CCDF policies. While the Child Care Bureau has provided critical support in this area by publishing documents that compile most of the key elements that states include in their State Plans that are submitted every two years, this information is not sufficient to meet the needs of policymakers and researchers. For example, the State Plans do not include all of the relevant information about how states operate their programs, do not use consistent ways of defining terms and policies, and do not include information about local variation or changes in policies between the State Plans. Other organizations have also worked to obtain state-level information on detailed CCDF practices.<sup>1</sup> However, these efforts also have not included all the information needed for certain types of research, in some cases have not been updated continuously, and have resulted in CCDF lead agencies having to respond to numerous requests for information.

As a result, state-level policymakers seeking to understand how their policies compare to other states, or seeking to understand what other states are doing in key areas, have not had complete information to look at. They have thus either had to operate with incomplete information, or seek other ways to obtain such information. Similarly, researchers interested in connecting policy with outcomes have been limited by the lack of a consistent, comprehensive source of cross-state information on the details of CCDF policies to allow them to examine the relationship between policy differences and key outcomes of interest to policy. They have had to piece together the

<sup>1</sup> Two examples of these efforts: (1) U.S. General Accounting Office (2003). Child Care: Recent State Policy Changes Affecting the Availability of Assistance for Low-Income Families. Washington, DC, and (2) Blank, Helen, and Karen Schulman, "State Child Care Assistance Policies 2007: Some Steps Forward, More Progress Needed", National Women's Law Center policy brief, September 2007.

needed information from different sources that may pertain to different points in time and have used different data collection methods. In many cases, these gaps have led researchers and policy analysts to contact CCDF lead agencies directly for this information, thus further increasing the burden on these agencies to provide these data.

The CCDF Policies Database project addresses many of these issues, creating inter-related sources of CCDF policy information that will support the needs of a variety of audiences:

(1) A detailed, longitudinal Database of CCDF policy information for all states, the territories, and the District of Columbia. The Database will capture the policies actually in effect at a point in time, rather than proposals or legislation. It will focus on the policies in place at the start of each fiscal year, but will also capture changes during a fiscal year.

(2) An ongoing Book of Tables publication, with information from the CCDF Policies Database in tabular form.

## **B. Design of the Database**

The database is organized into 32 categories, as shown in Appendix A. The focus is CCDF rules; the database does not contain information on caseloads, budgets, or outcomes. In addition, the database does not explicitly address the possibility that the rules found in state manuals or regulations may be applied differently in practice.

Each category listed in Appendix A contains a series of variables designed to capture the intricacies of the rules covered in the category. The variables include a mix of categorical, numeric, and text variables. Each variable has a corresponding notes field to capture additional details related to that particular variable. In addition, each category has an additional notes field to capture any information regarding the rules that is not already outlined in the category's variables.

For each state, timeframe, and category, the database will contain at least one record of information outlining the exact rules for that particular state and timeframe. Multiple records for a given state, timeframe, and category may exist. Multiple records are coded if rules differ across key variables, such as:

- County
- Program
- Family Group
- Provider Type
- Provider Subtype

Note that multiple records are not coded for every county in those states that vary their programs at the county level. Due to the difficulty of collecting data and coding data for multiple counties, the database contains only the policies for the largest county and possibly a handful of additional counties as pre-determined by project staff.

## **II. The Database**

### **A. Tables**

Tables in the database resemble standard spreadsheets. There are two types of tables: data and definition tables.

#### **1. Data Tables**

Data tables hold the coded CCDF policies data. For each category, a table exists that contains the values of all the variables for that category. In the table, there is a separate column for each variable in the category. Each row corresponds to a separate record for each state and timeframe. The tables are sorted by state and time.

Data is generally entered through forms in the database. The data entered creates a record that is stored in the tables. Data can also be entered directly into the tables, or it can be created by importing an Excel spreadsheet.

#### **2. Definition Tables**

Definition tables contain the name, descriptions, and variable types for the variables in each category. One of the largest definition tables is the variables table. This table contains all variables for all categories in the database.

Each of the key variables in the header record also has a corresponding definition table. For example, Provider Type corresponds with the table “ProviderTypes.” This table lists the provider type names.

### **B. Types of Variables**

For each category, a series of variables is used to describe the exact policies used by a particular state during a particular timeframe. There are three different types of variables:

#### **1. Numeric variables**

Numeric variables only allow the coder to enter a number in the field. However, text can be entered in the corresponding notes field. Predetermined negative numbers are used for options that are not numeric (such as NA or Not in manual).

## **2. Categorical variables**

Categorical variables have a set of pre-determined responses for the coder to choose from. Additional information can be captured in the corresponding notes field.

## **3. Text variables**

Text variables allow the coder to enter text. Most of the text variables limit the amount of text that can be entered in the field. Additional information can be captured in the corresponding notes field.

## **4. Additional fields**

Most variables have a corresponding notes field that allows the coder to enter details or nuances of a state's rules that are not captured in the available fields.

Each category ends with an additional notes field. These fields are free-form text variables where the coder can enter any other information about that category that does not fit within the specific variables.

Periodic changes to the variables are anticipated because existing variables may not adequately capture states' changing policies. Specifically, entries in the various notes fields will be reviewed to determine if new variables should be created or if existing variables should be altered.

## **III. Coding Specifics**

### **A. When New Records are Coded**

General Rule:

A new record is coded for a particular category only when there is a change in policy, creating a different set of rules than what was previously coded.

### **B. Header Variables**

#### **1. State (State)**

The state to which the rules of the record apply

Both the state name and the FIPS code are shown.

#### **2. County (County)**

The county (or geographic area) to which the rules of the record apply

County-level records are only coded in states that have county-level policy making. If a state has county-level policies, the largest county or the county serving the most families is coded. It is then determined which additional counties, if any, should be coded.

If the state does not have county-level policy making, the coder selects “all counties” for this field. In many states, county-level policies are only coded for certain categories, such as reimbursement rates, and all other categories have state level policies.

#### **3. Beginning Date (BeginDat) and End Date (EndDat)**

The beginning effective date of the rules of the record and the end effective date of the rules of the record

The date fields are formatted yyyy/mm/dd. There is only one record per state per time period, unless different counties, programs, family groups, provider types, and/or provider subtypes are coded. For a state, the beginning date of one record picks up where the previous record’s end date left off.

*Example:*

Record 1	state: Alabama	beginning date: 2007/10/01	end date: 2007/12/01
Record 2	state: Alabama	beginning date: 2007/12/02	end date: 2008/09/01

If the manual only provides a month and year, “01” is coded for the day.

*Example:*

Manual: October, 2009  
Code Beginning Date: 2009/10/01

The end date of a record is temporarily coded “9999/12/31.” This indicates the policies captured in that record are still in effect. When a new record is coded to reflect a policy change, the previous records end date is updated.

#### **4. Begin Majority Date (BeginMajority) and End Majority Date (EndMajority)**

The beginning and end date for the majority record, or record that applies to the majority of the caseload in a given state and time period

Both fields are temporarily coded “8888/88/88.” The use of 8888/88/88 indicates the record is not the majority record.

The beginning and end majority date fields are only marked once per state and time period for a particular category. The only exception to this is reimbursement rates and reimbursement rate policies, where additional majority records will be coded for different provider types.

The coder enters majority date information after coding all materials for a given state and time period during the round of coding. If there is only one record coded for a state and time period, then that record is also marked with the majority dates. If there are multiple records for a given state and time period (coded for different programs, counties, etc.), then the coder selects which record to code as the majority record. The majority date fields are coded for the record that applies to the majority of the caseload. The majority date fields correspond with the date fields for the given record.

For reimbursement rates, there are several records marked as the majority record for a given time period. In most cases, there are multiple records marked as the majority record as a result of the different provider types. If the state uses county level rates, all of the rates for the largest county are coded as majority records.

## **5. Program (Program)**

The program to which the rules of the record apply

The program name entered is the program name listed in the manual. For example, if a state calls its program Child Care Assistance Program, this is the name entered in the program field. Some states, such as California, have more than one program name.

## **6. Family Group (FamilyGroup)**

The family subgroup to which the rules of the record apply

This field will usually be coded “All.”

Family group is coded when there are different rules, within the same program, for a subgroup of families (for example, different copayments may be provider for families with children with special needs). If the differences are already captured in the variables, a separate record is not coded.

## **7. Provider Type (ProviderType)**

The provider type to which the rules of the record apply

Provider type is coded when there are different rules for different types of providers. This is relevant for the categories associated with provider policies and reimbursement rates. Coding different records for different types of providers for reimbursement rates is expected. Provider types include Center, Family Child Care Home, In-Home, and Group Family Child Care Home.

1. Center applies to formal care provided in a non-residential facility.
2. Family Child Care Home applies to formal or informal care provided in someone’s home (not the home of the child).
3. Group Family Child Care Home applies to formal or informal care provided in someone’s home (not the home of the child). Many states may not distinguish between family and group home care. If this is the case, use family child care home. If the state does distinguish between the two types of care, the rates for the provider serving a smaller number of children should be coded as Family Child Care Home and the rates for the provider serving a larger number of children should be coded as Group Family Child Care Home.
4. In-home applies to care provided in the child’s home. In-home is also sometimes used for care provided in a relative’s home.

For categories related to provider policies (all unregulated provider policy categories, other provider policies, and reimbursement rate policies), Provider Type is never coded NA. It is either coded for a specific type or coded “All.”

## **8. Provider Subtype (ProviderSubtype)**

The provider subtype to which the rules of the record apply

Provider subtype is coded when there are different rules for different subtypes of providers. This may include different quality ratings, different licensing standards, etc. This is relevant for the categories associated with reimbursement rates and sometimes provider policies. Not all states have different rates for different subtypes of providers, but many do. For example, a state may use the same rates for all providers or it may use a higher rate for licensed providers than it uses for unlicensed providers.

## **C. All other variables**

### **1. Percentages as whole numbers**

Percentages are coded as whole numbers. For example, if the answer to a variable is 15 percent, the variable is coded 15 rather than .15.

### **2. Special Codes**

#### **a. Not Applicable (NA)**

In the following cases, NA is placed in the variable field:

1. An entire category does not apply for a given state.  
*Example:* If a state does not have an assets test, the question asking if there is an assets test is coded no. All other variables in the category are then coded NA.
2. A previous variable completely explains the rule and additional information about the variable is not needed.  
*Example:* If travel hours are not authorized, then the next question giving the maximum number of travel hours is coded NA.
3. The variable instructions specify the use of NA for a given situation.  
*Example:* If TANF families are not eligible for CCDF subsidies, the question about whether TANF families have different activity requirements is coded NA.

b. Not in manual

Not in manual is used if the information cannot be found in the caseworker manual and there is no clear indication of whether or not the policy exists.

*Example:* If the manual gives eligibility requirements, including how income is counted, but does not list any assets tests, Not in manual is not coded. In this case, the absence of an assets test in the manual implies there is no assets test.

*Example:* If a state does not put any information about provider requirements in the manual, Not in manual is coded. The absence of provider policies probably means that those policies are covered in another document or manual that is not being collected/coded.

## IV. Category and Variable Information

### 1. Basic Criteria for Eligibility

#### General Notes/Concepts:

To be eligible for CCDF assistance, the family must meet certain criteria not related to income or assets. The following variables outline those criteria. Clients must meet the children's age eligibility requirements. They also must meet the activity requirements or fit one of the "other eligibility" criteria. The variables apply to families who are not automatically eligible for CCDF subsidies.

#### Subgroup Issues:

The general rule is coded for each variable, and any subgroup variation is noted. For example, if only TANF families are allowed to participate in job search activities, the variable for job search activities is coded No and the notes explain that only TANF families are eligible for job search activities.

#### Additional Coding Notes:

If the state's policies differ for initial and continuing eligible, the policies for initial eligibility are coded. The continuing eligibility policies are coded in the notes fields.

## 2. Definition of Family

### General Notes/Concepts:

This is the definition of family that is used for establishing family size. This definition assumes that the family (or the "assistance unit") always includes biological parents, adoptive parents, or legal guardians and their minor children. Any variation to this base group is captured in this category. The variables apply to families who are not automatically eligible for CCDF subsidies.

### Subgroup Issues:

None

### Additional Coding Notes:

The following variables assume a parent is defined as a biological parent, adoptive parent, or legal guardian.

### Variables and Notes:

<b><i>Definition of Family</i></b>	
Maximum age a person could be considered a minor/teen parent.  (FamTeenParentDef)	<u>Variable Options</u> Numeric (-5) to99 (integer) (-4) - NA (-5) - Not in manual  <u>Coding Notes</u> 1. The maximum age provided is coded, and any exceptions are described in the notes field. (For example: If the parent is in school the maximum age is 19, and if the parent is not in school the maximum age is 17. Age 19 is coded and the variation regarding school is described in the notes field.)
Who in the household must be included in the unit when a minor has a child receiving the subsidy and none of the minor's siblings are receiving CCDF funding.  (FamTeenParentSibsNotCCDF)	<u>Variable Options</u> 0 - NA 1 - Only minor parent and child(ren) included 2 - Parents/caretakers of the minor parent included 3 - Parents/caretakers and minor siblings of the minor parent included 92 - Not in manual 99 - Varies  <u>Coding Notes</u>
Who in the household must be included in the unit when a minor has a child receiving the subsidy and one or more of the minor's siblings are receiving CCDF funding.  (FamTeenParentSibsCCDF)	<u>Variable Options</u> 0 - NA 1 - Minor and child form one unit, and parent and siblings form another 2 - Minor, child, parent, and siblings form one unit 92 - Not in manual 99 - Varies  <u>Coding Notes</u>

### 3. Income Definition

General Notes/Concepts:

This category describes the types of income included for determining eligibility and copayments. The definitions defined in this category determine if the applicant’s income falls below the eligibility threshold for the applicant’s family size. For the purposes of the database, income is defined as both earned and unearned income. Earnings are defined as income from work (wages, salary or self-employment). The variables apply to families who are not automatically eligible for CCDF subsidies. The database does not address traditionally included or excluded income, such as those listed below.

Traditionally included income:

1. Alimony
2. Earnings/wages/salary
3. Unemployment compensation
4. Work study payments
5. AmeriCorps payments
6. Dividends/interest on savings/bonds/trusts
7. Pensions/annuities
8. Veterans’ benefits
9. Cash payments

10. New rental income
11. Social Security
12. Workers’ compensation

Traditionally excluded income:

1. WIA payments
2. Adoption subsidy payments
3. Loans/grants
4. Capital gains

Subgroup Issues:

None

Additional Coding Notes:

If income is treated differently for eligibility and copayment purposes, the policies for eligibility are coded and the copayment policies are described in the variable notes fields. It is assumed that gross income is used in determining financial eligibility. If a manual states that gross income is not used (for example: the state uses net income) or there are exceptions to the use of gross income, this information is described in the additional notes section. If income is treated differently for irregular work hours, this information is described in the additional notes section.

## 4. Eligibility Thresholds

### General Notes/Concepts:

This category describes the income eligibility requirements that families must pass in order to be eligible for CCDF. Countable income must be below the provided standard for that particular family size. The variables apply to families who are not automatically eligible for CCDF subsidies.

### Subgroup Issues:

None

### Additional Coding Notes:

There is one note field for initial eligibility thresholds (Notes\_elig) and one note field for continuing eligibility thresholds (Notes\_cont) rather than note fields for each individual variable or value. There is also an overall category note field.

### Variables and Notes:

Variable	Variable Options and Notes
<i>Initial Eligibility Thresholds by Family Size</i>	
The monthly dollar amount of the initial eligibility threshold for a family size of one.  (EligFamSizeOne)	<u>Variable Options</u> Numeric (-5) to 9999 (integer) (-4) - NA (-5) - Not in manual  <u>Coding Notes</u> 1. NA is coded if no eligibility threshold is provided for family size 1.
The monthly dollar amount of the initial eligibility threshold for a family size of two.  (EligFamSizeTwo)	<u>Variable Options</u> Numeric (-5) to 9999 (integer) (-4) - NA (-5) - Not in manual  <u>Coding Notes</u>
The monthly dollar amount of the initial eligibility threshold for a family size of three.  (EligFamSizeThree)	<u>Variable Options</u> Numeric (-5) to 9999 (integer) (-4) - NA (-5) - Not in manual  <u>Coding Notes</u>
The monthly dollar amount of the initial eligibility threshold for a family size of four.  (EligFamSizeFour)	<u>Variable Options</u> Numeric (-5) to 9999 (integer) (-4) - NA (-5) - Not in manual  <u>Coding Notes</u>

## 5. Asset Tests

### General Notes/Concepts:

This category describes the types of tests imposed on assets. It is assumed that all assets are disregarded unless described below. The variables apply to families who are not automatically eligible for CCDF subsidies.

### Subgroup Issues:

None

### Additional Coding Notes:

None

### Variables and Notes:

## 6. Basic Application Criteria

### General Notes/Concepts:

Families requesting child care assistance go through an application process as outlined by each state's guidelines. Eligibility is determined based on the information provided during the application process. The variables apply to families who are not automatically eligible for CCDF subsidies.

### Subgroup Issues:

None

### Additional Coding Notes:

## 7. Verification

### General Notes/Concepts:

During the application process, individuals requesting child care assistance must provide verification of eligibility criteria. The variables apply to families who are not automatically eligible for CCDF subsidies.

### Subgroup Issues:

The variables capture the policies for the modal CCDF applicant. In cases where there is variation, the policy for the modal applicant will be coded and the variation for the subgroup will be described in the notes.

### Additional Coding Notes:

The variables capture what information must be verified at the time of application. Items are coded “yes” if documentation, beyond a statement from the applicant, is required. If a signed or oral statement from the applicant is the only requirement, the item is coded “no,” and the policy is described in the additional notes field. If information is only verified when questionable, the item is coded “no,” and the policy is described in the additional notes field.

## 8. Redetermination

### General Notes/Concepts:

Recipients of child care subsidies receive assistance for a set period of time, which may vary by state. After this time period has expired, states redetermine the recipient's need and eligibility for care. The variables apply to families who are not automatically eligible for CCDF subsidies.

## 9. Requirements for Reporting Changes

### General Notes/Concepts:

Participants in child care subsidy programs must report changes that occur while they are receiving child care services. Interim changes that must be reported may include changes in qualifying factors as well as general information such as name or phone number. The variables apply to families who are not automatically eligible for CCDF subsidies.

### Subgroup Issues:

## 11. Terms of Authorization

### General Notes/Concepts:

Families may be authorized to use child care for different activities. States may also place a limit on the amount of care a family can receive. Limits may be placed on care based on qualifying activity or family subgroup.

### Subgroup Issues:

None

### Additional Coding Notes:

None

### 13. Waiting List Policies

General Notes/Concepts:

If there are more children eligible for subsidies (meeting all eligibility requirements) than can be served, a waiting list may be established for families/children who cannot receive subsidies immediately due to a lack of funding.

Subgroup Issues:

None

Additional Coding Notes:

These variables capture policies for whether or not a waiting list is used when funds are not available. They do not capture whether or not a waiting list is currently in use in the state.

## 14. Copayment Exemptions

### General Notes/Concepts:

A family receiving CCDF-funded subsidies may be required to pay a portion of the cost of child care, referred to in the Database as the "copayment". Some families may be exempt from having to pay any copayment.

### Subgroup Issues:

None

### Additional Coding Notes:

## 15. Copayment Adjustments

### General Notes/Concepts:

A family receiving CCDF-funded subsidies may be required to pay a portion of the cost of child care, referred to in the Database as the "copayment". There may be adjustments for multiple children in care, for part-time vs. full-time care, and for other reasons.

## 17. Copayment Income Thresholds

### General Notes/Concepts:

Copayments may vary by income category. For example, a family of 3 with income up to \$x may pay a% of income, while a family with income from \$x to under \$y may pay b% of income. This category is a "matrix" that gives the income cutoffs defining the income categories for each family size.

### Subgroup Issues:

Subgroup variations are captured with separate records.

### Additional Coding Notes:

This category contains one notes field for the entire category and does not contain individual notes fields for each variable or value. There are three copayment threshold tables that can capture twenty values for each family size (1-10) for a total of sixty values per family size. States only have additional copayment tables as needed. States with 20 or less copayment thresholds will only have one table, and states with 40 or less copayment thresholds will only have two tables.

### Variables and Notes:

## 18. Copayment Amount

### General Notes/Concepts:

Copayments may vary by income category. This category is a "matrix" that holds the dollar amount or percent applicable to each income category, for each family size. (Whether the figure represents a dollar amount or a percentage, and how that dollar amount or percentage is used, is indicated by "Basic Copay Calculation Method" under "Copayment Adjustments".)

### Subgroup Issues:

Subgroup variations are captured using separate records.

### Additional Coding Notes:

This category contains one notes field for the entire category and does not contain individual notes fields for each variable or value. There are three copayment amount tables that can capture twenty values for each family size (1-10) for a total of sixty values per family size. States only have additional copayment tables as needed. States with 20 or less copayment amounts will only have one table, and states with 40 or less copayment amounts will only have two tables.

## 19. Reimbursement Rate Policies

### General Notes/Concepts:

This category provides definitions used in determining provider reimbursement rates.

### Subgroup Issues:

In order to capture subgroup variation, separate records can be coded for four provider types (center, family child care home, group family child care home, and in-home). Separate records can also be coded for provider subtypes based on licensing, quality rating, etc.

## 20. Reimbursement Rates

### General Notes/Concepts:

This category provides information about provider reimbursement rates.

### Subgroup Issues:

In order to capture subgroup variation, separate records are coded for four provider types (center, family child care home, group family child care home, and in-home). Separate records can also be coded for other provider subtypes based on licensing, quality rating, etc.

### Additional Coding Notes:

Up to ten geographic areas are coded for each state. If the state provides different rates for every county, the rates for the largest county are coded.

### Variables and Notes:

This variable is coded for the record that applies to the base licensed rate (or in the absence of licensed, the registered rate) for each provider type. When multiple sub-state areas are coded, this variable is only coded for the most populous county or region. Because in-home providers are often not required to be licensed, the base rates for in-home providers will usually not reflect rates for licensed providers.</p>
<p>This is the record with the highest reimbursement rates for this type of provider for the Book of Tables.</p> <p>(ReimburseHigh)</p>	<p><u>Variable Options</u>            (-1) - Record reflects highest rates for provider type            0 - Record does not reflect highest rates for provider type</p> <p><u>Coding Notes</u>            1. This variable is coded for the record that applies to the highest licensed rate (or in the absence of licensed, the registered rate) for each provider type. This is the rate that has the highest differential for quality or other rating systems. When multiple sub-state areas are coded, this variable is only coded for the most populous county or region. Because in-home providers are often not required to be licensed, the highest rates for in-home providers will usually not reflect rates for licensed providers.</p>

## 21. Basic Eligibility and Other Requirements for Legally Unregulated Home-Based Providers

### General Notes/Concepts:

To ensure the health and safety of children whose care is paid through CCDF, states are permitted to require legally unregulated providers to meet certain standards in order to receive CCDF payments. This category of variables describes certain basic eligibility and other standards not covered in other sections for legally unregulated home-based providers who wish to receive CCDF payments for services delivered.

### Subgroup Issues:

Variations by type of unlicensed provider are captured using separate records.

### Additional Coding Notes:

## 22. Background Checks for Legally Unregulated Home-Based Providers

### General Notes/Concepts:

To ensure the health and safety of children whose care is paid through CCDF, states are permitted to require legally unregulated providers to meet certain standards in order to receive CCDF payments. This category of variables describes the background checks to which legally unregulated home-based providers and other members of their households are subject if they wish to receive CCDF payments for services delivered. The background checks that states and territories most commonly require include criminal history, child protective services history, and adult protective services history. These variables describe the requirements that apply in each of those categories.

## 24. Tuberculosis Prevention Requirements for Legally Unregulated Home-Based Providers

### General Notes/Concepts:

To ensure the health and safety of children whose care is paid through CCDF, states are permitted to require legally unregulated providers to meet certain standards in order to receive CCDF payments. This category of variables describes the measures states take to help ensure that children cared for by legally unregulated home-based providers are not exposed to tuberculosis.

### Subgroup Issues:

Variations according to the type of unlicensed provider are captured using separate records.

### Additional Coding Notes:

None

### Variables and Notes:

## 25. Health and Safety Checklist Requirements for Legally Unregulated Home-Based Providers

### General Notes/Concepts:

To ensure the health and safety of children whose care is paid through CCDF, states are permitted to require legally unregulated providers to meet certain standards in order to receive CCDF payments. This category of variables describes the health and safety checklists and checklist procedures used by states to help improve or ensure the health and safety of children receiving CCDF subsidies.

### Subgroup Issues:

Variations according to the type of unlicensed home-based provider are captured using separate records.

### Additional Coding Notes:

None

### Variables and Notes:
